

## Custom Fabrication Service

FPM can fabricate our exquisite engine turned metal to fit your application. In order for us to quote, we must have the following information and a pattern of your dash or firewall to duplicate.

1. An exact pattern of the item is required. Patterns are best made of white poster board available at print shops or art supply stores this material is about 1/32" thick and works well for patterns.
2. Cut poster board to exact shape you want and give dimensions and radius of corners if possible.
3. Label face side of pattern. Also label top, bottom, left, and right sides.
4. Mark center and size of holes required for gauges and switches and draw with compass. Do not cut out.
5. Specify circle pattern desired: .5", .75", 1.0", 1.5", or 2.0"
6. Specify material to use: Aluminum or Stainless Steel
7. Specify thickness of material needed either .030 normally used as an overlay with an existing backing or .063" which is self-supporting.
8. Your name, address, and daytime phone, fax, or e-mail.
9. CAD drawings are also accepted in the form of .dxf files.

We will contact you with a quotation for the part required.

We can normally give you an idea of cost from a picture or cad drawing if you e-mail it to [sales@fpmmetals.com](mailto:sales@fpmmetals.com)

All dashes are one of a kind and are only as accurate as the pattern you make. In some cases the original dash can be sent to duplicate please call 402-729-2264 for information and instructions before doing this.

We do not drill mounting screw holes, as it is better to position dash in the car first and then drill these holes for greatest accuracy.

Material is flat and works best in a flat application. Materials can be bent or rolled, the thinner the better, however, we don not do this. It would be the responsibility of the customer to form.

Most custom dashboards cost \$150 to \$400 depending on size and the complexity of pattern. The larger the circle pattern the less the material cost. Some intricate aluminum and all stainless steel dashes are cut on a laser and as such are always more expensive.

We love to see pictures of our product in you cars. We use them in press releases sent to various magazines. Please send us your photos if you want to be included. If you have any questions pleas call 402-729-2264 or e-mail [sales@fpmmetals.com](mailto:sales@fpmmetals.com)
